WHAT’S INSIDE

Building Types

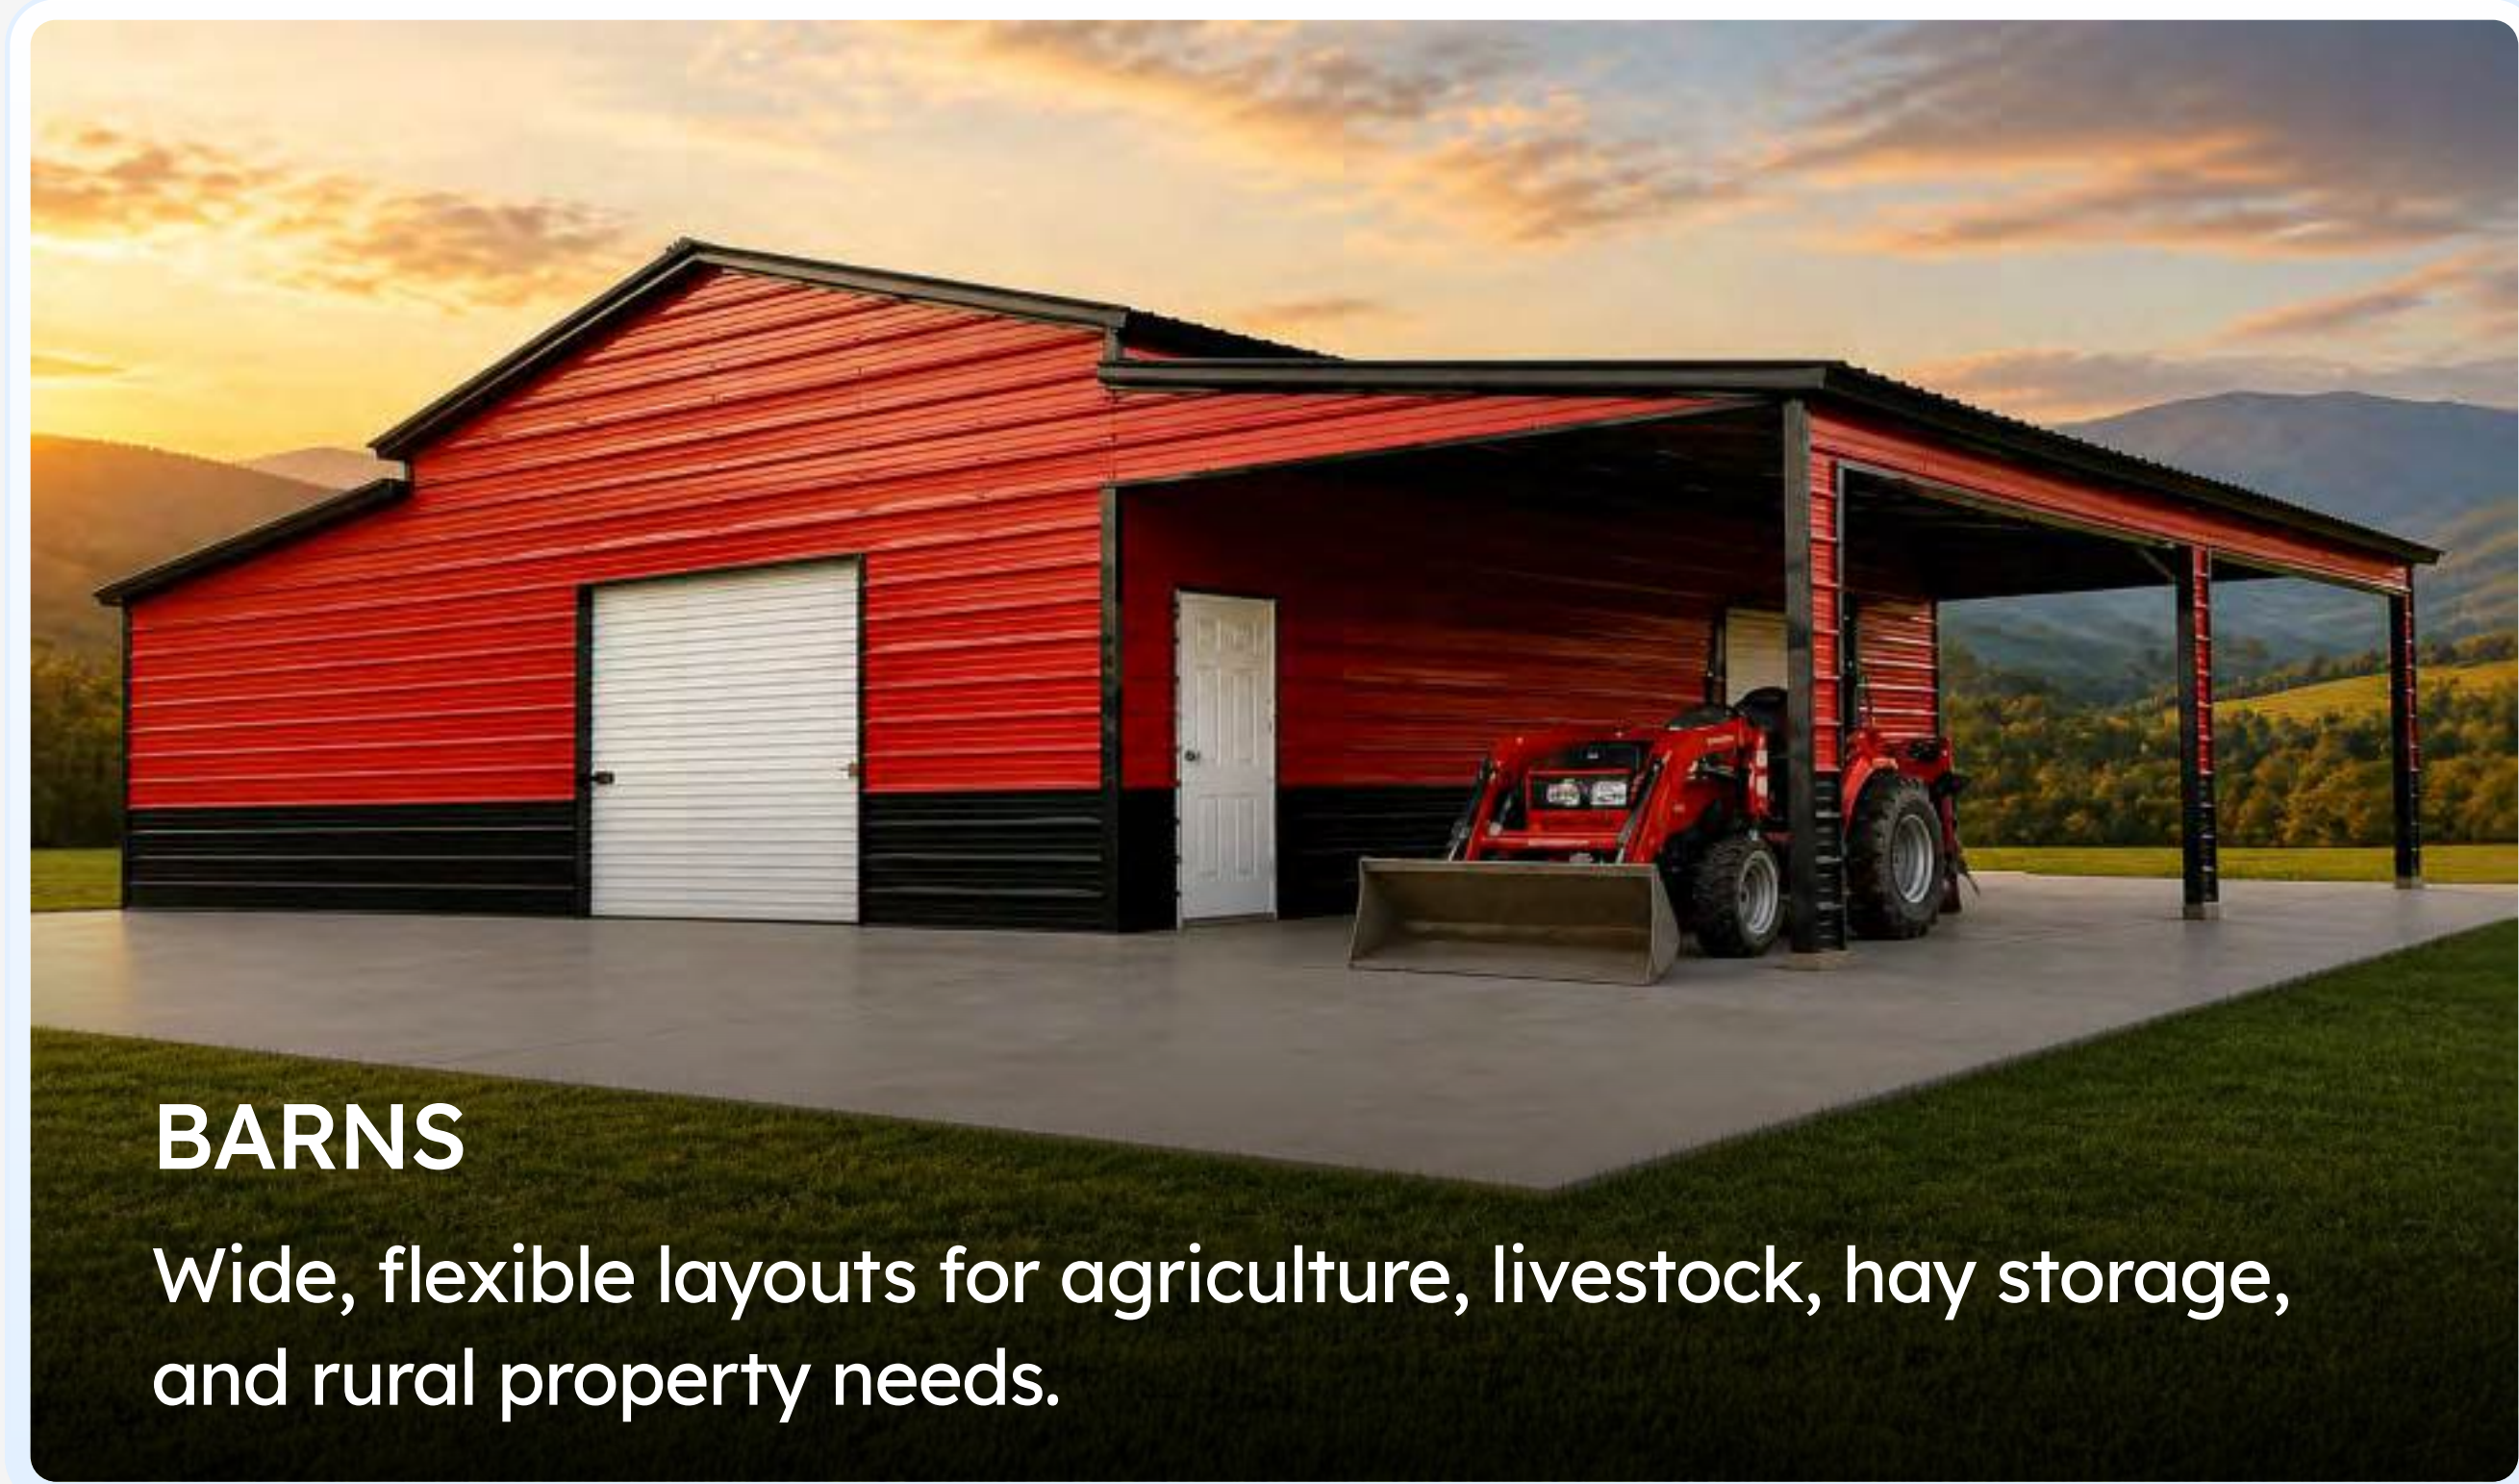

Choose a structure that matches your space and how you intend to use it. Direct Metal Structures can tailor a building to fit the job, your property, and your lifestyle. Some of our most popular configurations include

GARAGES
Fully enclosed storage for vehicles, tools, workshops, farm equipment, and secure personal space.

CARPORTS
Open-air protection for cars, trailers, campers, boats, and equipment with fast access.

BARNS
Wide, flexible layouts for agriculture, livestock, hay storage, and rural property needs.

RV COVERS
Tall clearance and strong weather protection for RVs, campers, boats, and oversized recreational vehicles.

COMMERCIAL BUILDINGS
Clear-span and large-format structures for business, storage, shop space, and light industrial use.

KEY DECISION 1

Dimensions

The right structure size will depend on how you intend to use it and what you plan to store.

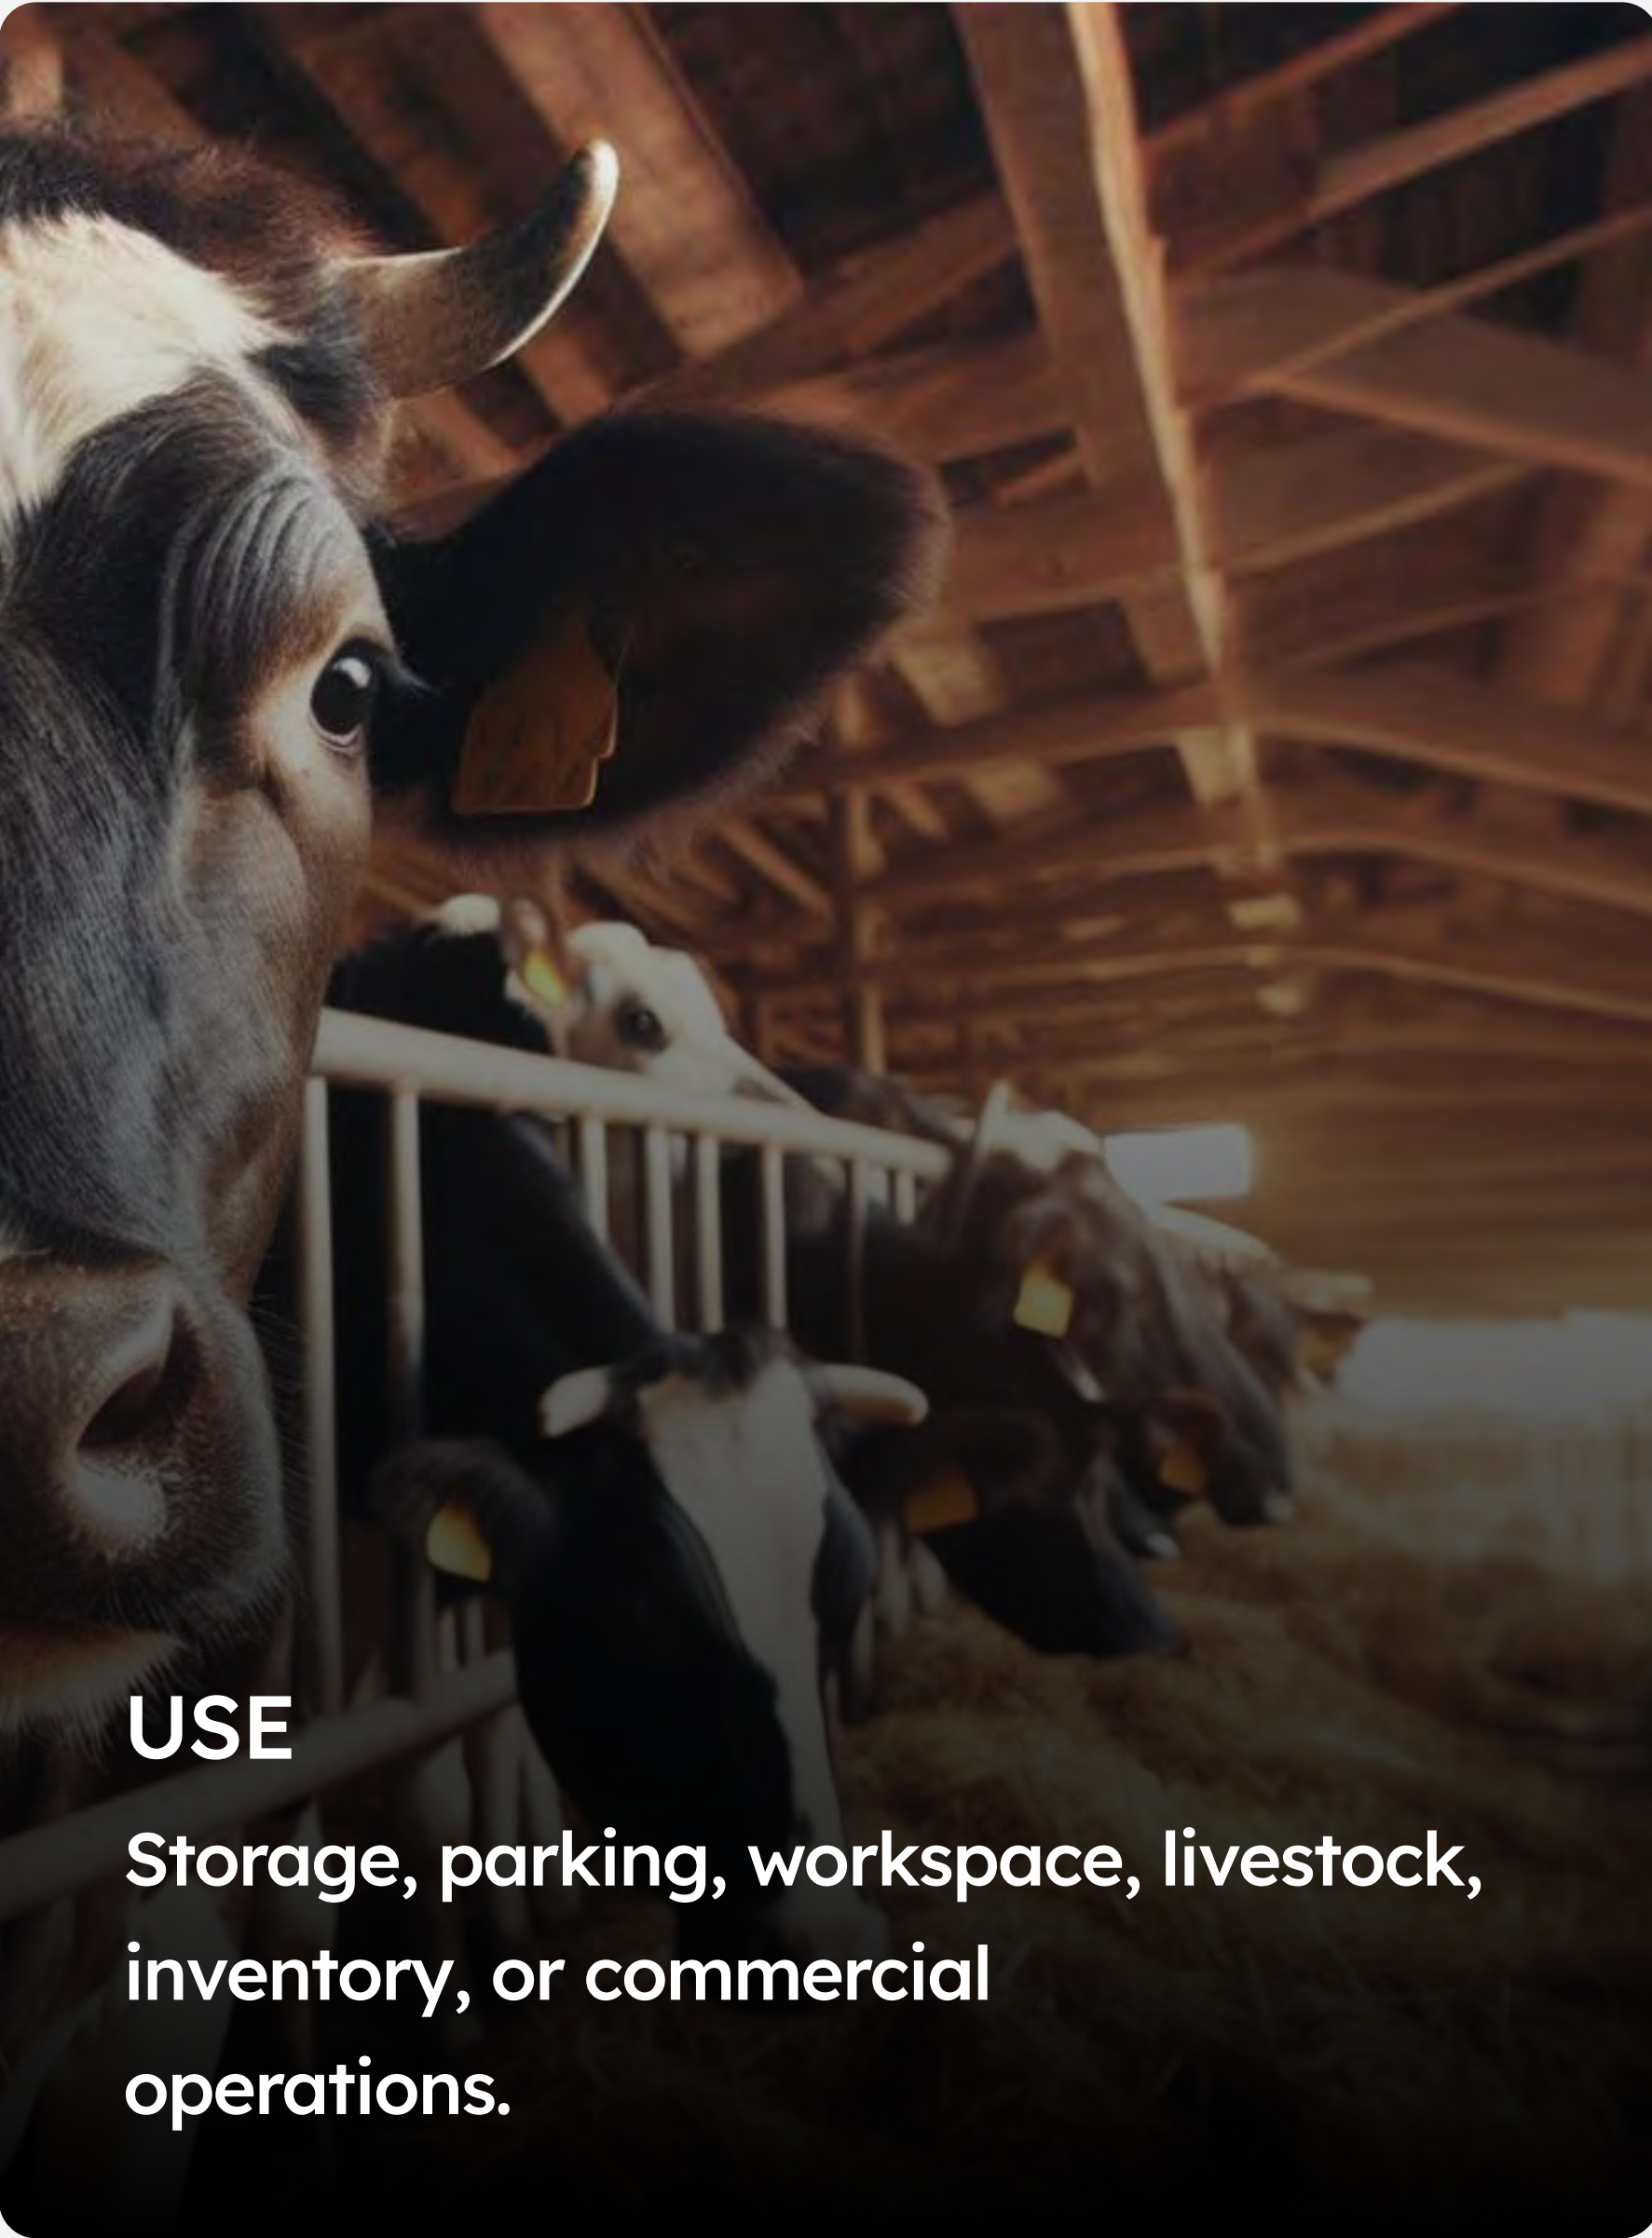

Width 12' - 60'+ Match vehicle doors, work bays, and clearance needs.	Length 20' - 120'+ Plan for storage, circulation, and future expansion.	Height 8' - 16'+ Size for RVs, lifts, trailers, and tall equipment.	Certification Available Ask about wind, snow, and permit-ready options.
---	---	---	---

A building expert can help you think beyond the footprint. Door swing, vehicle turning space, wall height, future shelving, and local requirements all affect the final size.

- Measure the largest item that will go inside.
- Leave room for doors, walkways, and work zones.
- Confirm local code, pad, and site access needs.

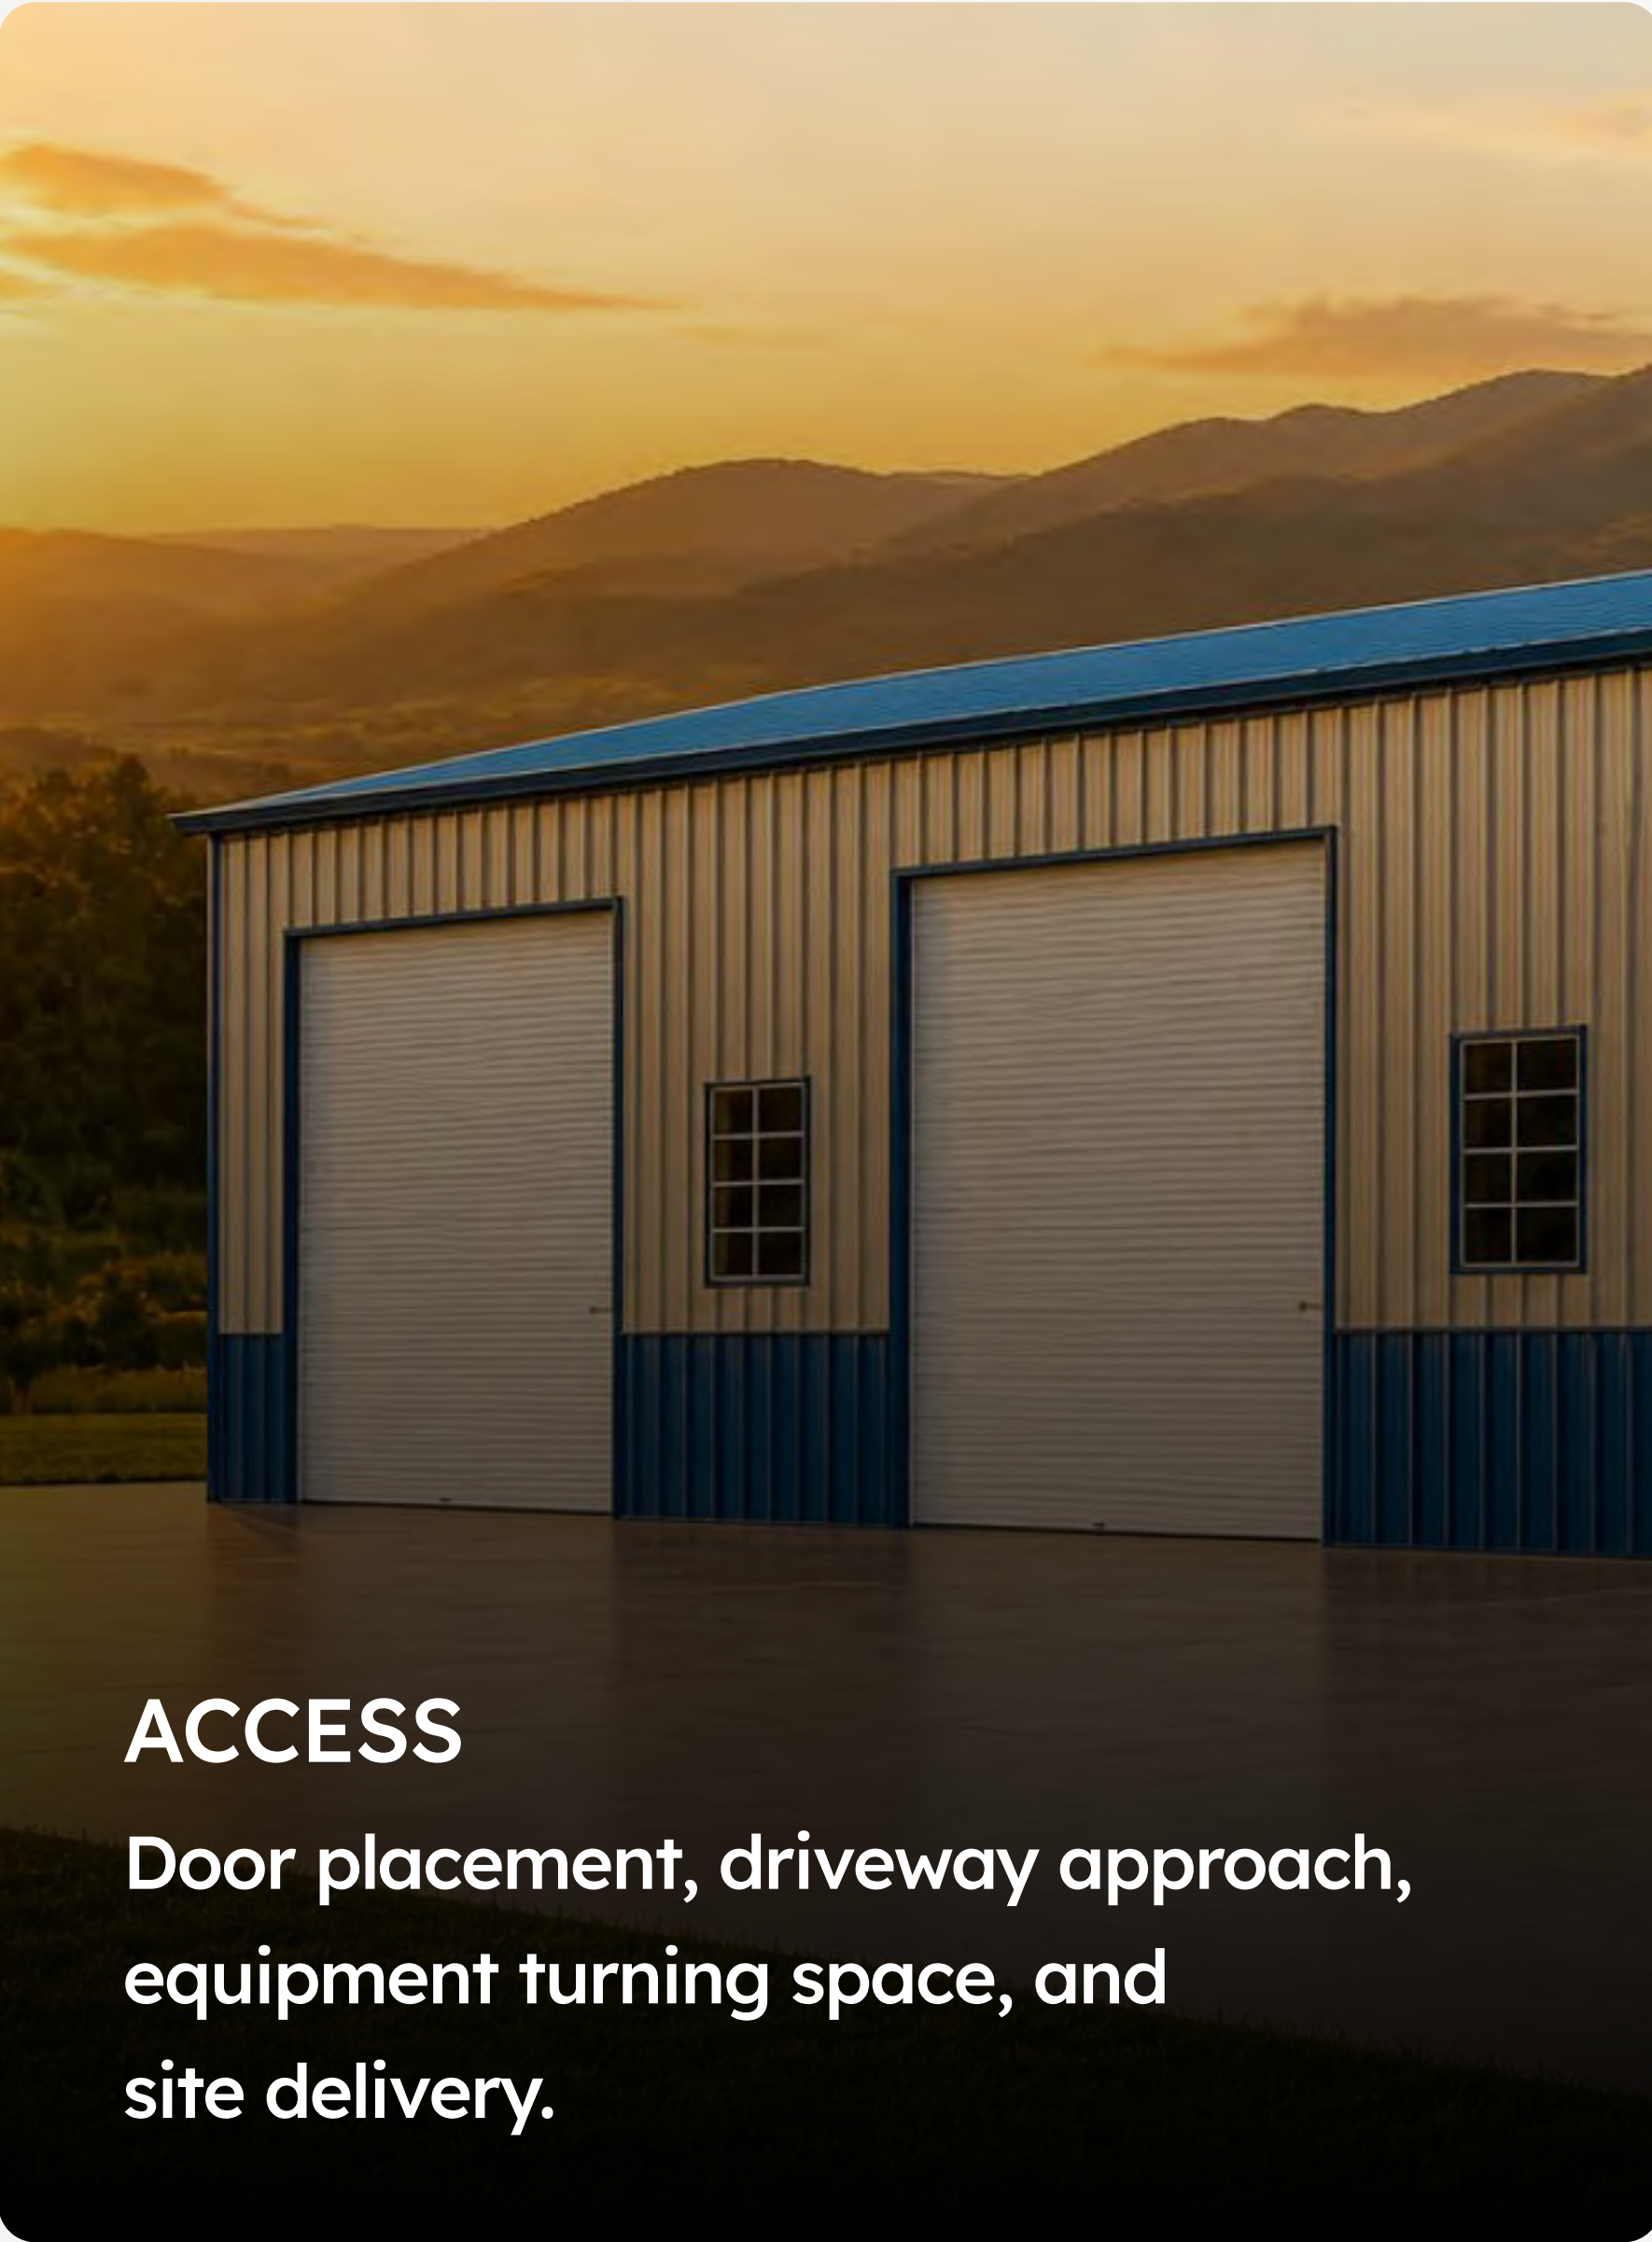

Plan the building before the price.

A cleaner scope keeps the quote useful and prevents expensive changes after the order is placed.

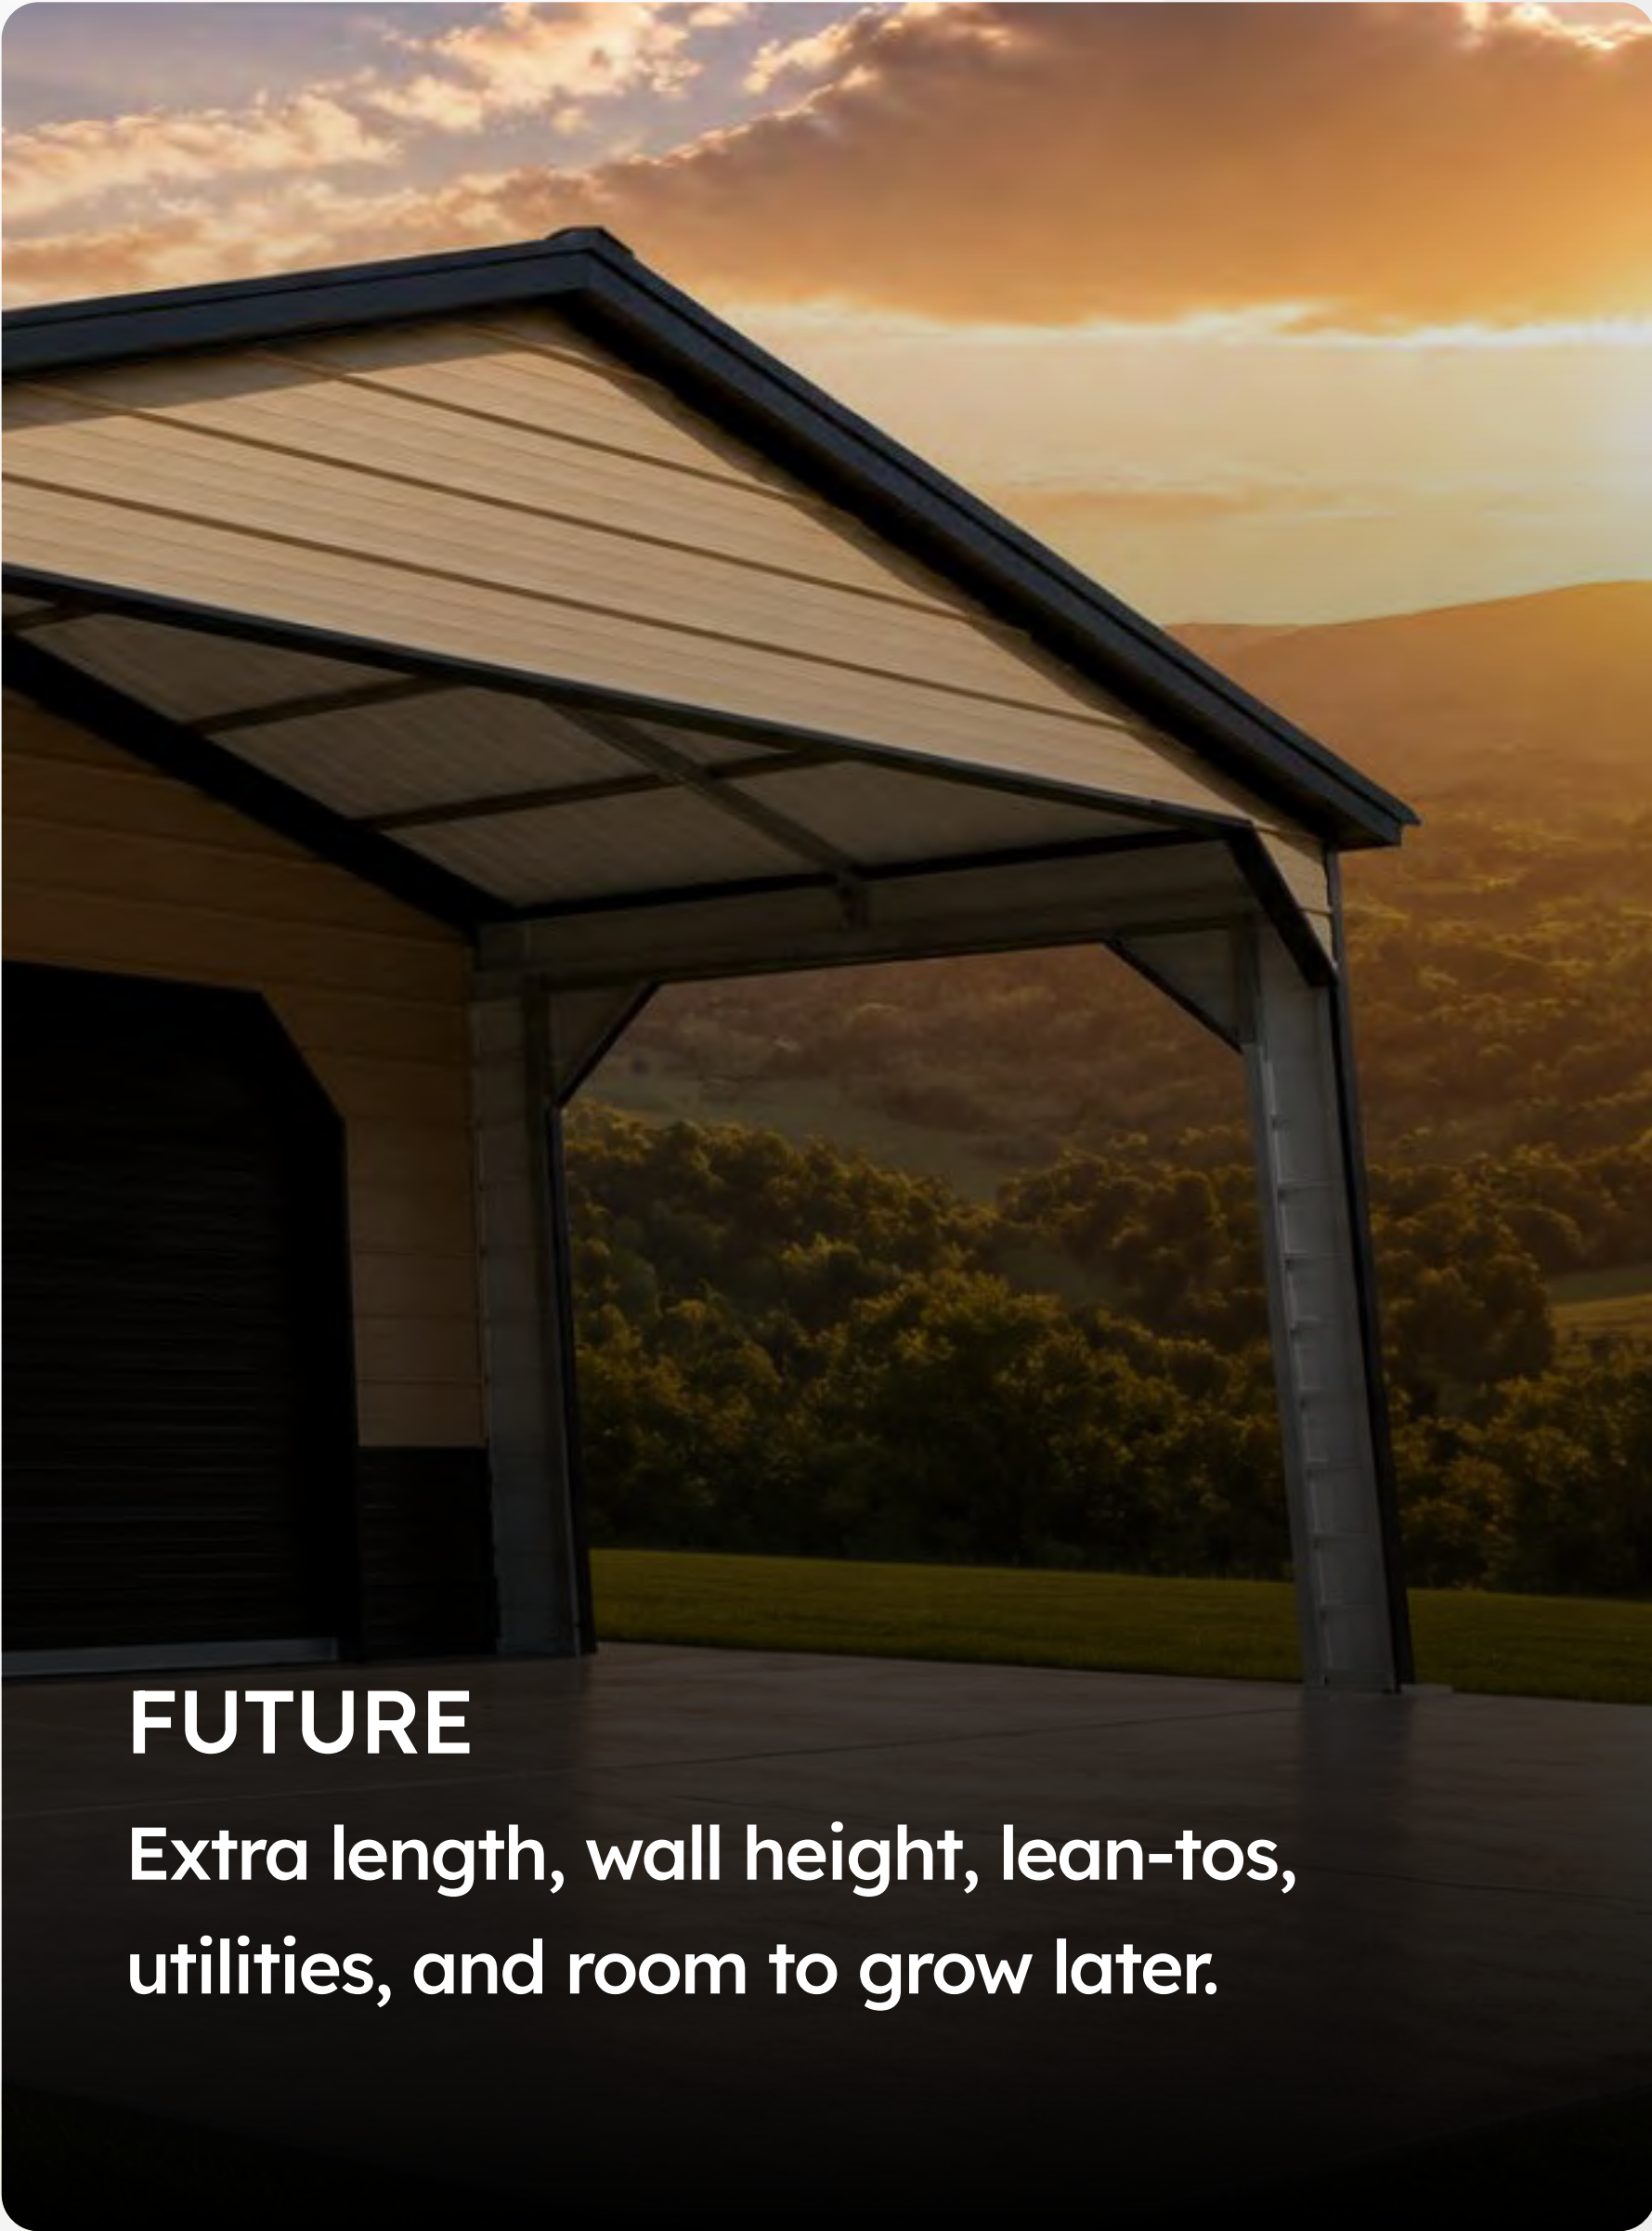

USE

Storage, parking, workspace, livestock, inventory, or commercial operations.

ACCESS

Door placement, driveway approach, equipment turning space, and site delivery.

FUTURE

Extra length, wall height, lean-tos, utilities, and room to grow later.

Not sure what size is the best fit?

KEY DECISION 2

Roof Styles

Roof style changes the look, drainage, and long-term performance of the structure. Vertical roof designs are the strongest recommendation for many certified and larger builds, but we offer the following options:

 RECOMMENDED FOR CERTIFIED BUILDS.

Vertical Roofs

Vertical panels help shed rain, snow, leaves, and debris more efficiently. This is the premium choice for large or certified structures.

 BEST FOR

Certified buildings

Large spans

Weather zones

A-Frame Roofs

A sharper residential profile with boxed eaves, giving the building a more finished look while keeping horizontal roof panels.

 BEST FOR

Garages

Home sites

Finished look

Regular Roofs

Rounded eaves and horizontal panels create a simple, economical option for shorter structures and lower weather exposure.

 BEST FOR

Budget builds

Basic cover

Short spans

Not sure which Roof Style fits your Area?

KEY DECISIONS 3 - 6

Make It Yours

After the main structure is set, the details make it work: doors, windows, lean-tos, color choices, and insulation all shape how the building looks and functions.

DOORS
Choose roll-up garage doors, walk-in doors, or sliding barn doors sized around the vehicles and equipment you use most.

WINDOWS
Add light, airflow, and a more finished exterior to your metal building.

LEAN-TOS
Extend covered space for equipment staging, shaded work areas, hay storage, or extra vehicle parking.

COLORS
Choose wall, roof, and trim colors independently, then preview combinations before you order.

Preview your color combination

Use the DMS 3D Designer tool to test roof, wall, and trim colors together before making your final selection.
